

Flat Expansion Vessel

Model: IB012EVF

Size: 12 Ltr Heating

- Maximum working pressure 3 bar
- Temperature range – 10°C + 100 °C
- Dimensions D 325 x 175 Height
- Water connection 3/4"
- High resistant rubber bladder

The expansion vessel is ideally sited either on the return leg of a central heating circuit, although installation on the flow is also possible if sited on the suction side of the system circulating pump.

Approvals:-

CE endorsed, TUV

Designed for heating installations in closed circuit, to absorb the volume increase caused by the rise in temperature of the heating fluid.

Please note: this vessel is not to be installed in an open circuit.

An additional item which should be included when purchasing a vessel is the vessel isolation connection valve. This allows the vessel to be removed for maintenance without draining the fluid from the system.
